(c)2025 DPS-Promatic srl

The coin-operated baggage scale model **Royal BAG**, manufactured in Italy by DPS-Promatic srl, is our new innovative luggage scale, with many improvements and same reliability as our previous models sold world wide since many years.

The main difference from previous models is the body, made of *strong aluminum*, for longer life in any condition, and high stability, because the weight stays mainly in the steel bottom part. It has a blue light, visible through the translucent sides of the head, and is fitted with lexan panels in many languages, for instructions, attraction and protection of the body from scratches. It is shipped with an electronic coin acceptor (standard mono coin, multi-coin on request), but can also work with credit card readers (to be supplied by customers). It can weigh one time or it can be set to weigh for 10 to 60 seconds (standard setting is 20 seconds) so people have time to weigh more than one luggage.

Dimensions: cm 35x60x105
 Range: 3-160 Kg
 Accuracy: 100g
 Power: 110-230VAC 15W

The LCD display shows clear big size digits on a blue background. The coin acceptor, on the right side, can accept one coin type (standard version) or accept up to 6 different coins (on request)
